Wynn L. White Consulting Engineers is a nationwide leader in the field of moisture problem prevention and resolution. Our firm is a professional engineering firm founded in 1987. We are professional engineers (civil, environmental, and mechanical), inspectors, and construction management consultants who offer our clients sound, practical solutions to moisture issues. We are **not** one of the many “instant experts” who have emerged in the mold industry; we utilize our education, experience, and common sense to provide customers resolutions to complex and simple moisture issues.

Buildings are not supposed to have moisture problems; however, moisture can find its way in to cause difficulties. Moisture within buildings can be caused by improper design, poor construction, ineffective operation, or intrusion events such as leaks or floods. Excessive moisture within our buildings can lead to poor indoor air quality, mold infestation, and building component damage.

***Mold is not always a problem, but is always a symptom of a moisture issue within our buildings.***

### **Our Clients**

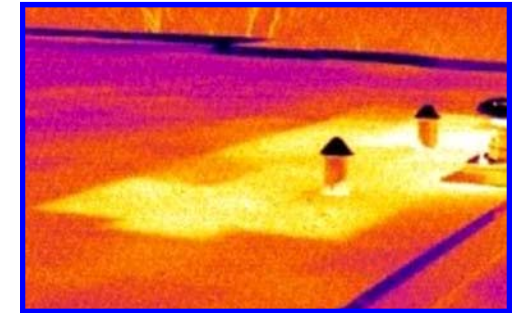

- Building Owners
- Insurance Companies
- Law Firms (Plaintiff and Defendant)
- Hospitals
- Hotels
- Apartment Complexes
- Schools
- Industrial Facilities

You can rely on our engineering and construction management services to help you effectively and safely eliminate moisture and mold within your building.

*Old buildings—new buildings, we are your source for moisture problem resolution.*

We specialize in solving complex moisture related problems in multi-story commercial buildings including sensitive facilities such as schools, hospitals, and hotels. In addition, our firm can design required corrective changes to your building.

*Thermographic image of moisture in roofing*

Because moisture in buildings can come from a variety of causes, we have put together a team of professionals capable of addressing and solving all facets.

Our team consists of:

- Civil Engineers
- Environmental Engineers
- Mechanical Engineers
- Construction Managers
- Building Inspectors
- Health, Safety, and Environmental Scientists
- Heating, Ventilation, and Air Conditioning (HVAC) Professionals
